

Windrower by blower

The SOMMIER windrower is easily mounted on any standard three-point tractor hitch.

The blower fan is driven by a cardan shaft mounted on the tractor's power take-off.

Maximum PTO speed 540 rpm.

Minimum power requirement: 50 hp.

Use:

Blowing on the ground can be done by bands of 4 to 5 meters wide with a speed of 3 to 4 Km/h on products such as fruits in shell, chestnuts, olives.

The system of blowing allows a collection of the product without dirtying it and by eliminating the leaves, which facilitates the collection and the cleaning of the interline.
